Control

High  
Reliability

- ✓ Sampling Time 50ms
- ✓ High Accuracy  $\pm 0.1\%$
- ✓ Speed upper to 115200 bps

### Excellent Anti-Interference Ability

Adopt new anti-interference algorithm and pass the highest level of EMC verification in CE certification. It can resist electromagnetic interference in heavy noise environment.

### Double-Loop Design

The input adopts double-loop design, which can accept two sensor input and drive two output module at the same time, realize temperature and humidity control on a WT909.

### High Speed Sampling and High Accuracy

Both loops can perform high-speed sampling for 50ms, enabling stable control and response. Built-in 18-bit high resolution ADC circuit provides up to 0.1% accuracy.

### Certification and Universal Voltage

All models get CE approval. Operate on any voltage from AC 85~265V at 50/60 Hz, DC 24V is also available.

### Customize Function Key

It can be quickly executed the event by A/M key.  
Ex: auto/manual switch, run/stop switch etc.

### Parameter Lock Function

All parameters are separated in five operation levels (Level1~Level5). Each parameter can be hidden or locked to prevent users unauthorized changes.

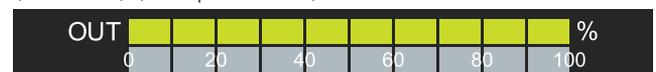

### Status Indicator Light

Real time monitor the status of output (OUT1/OUT2) \ alarm(AL1/AL2/AL3), auto-tuning (AT), manual output(MAN) and program execute(PRO).

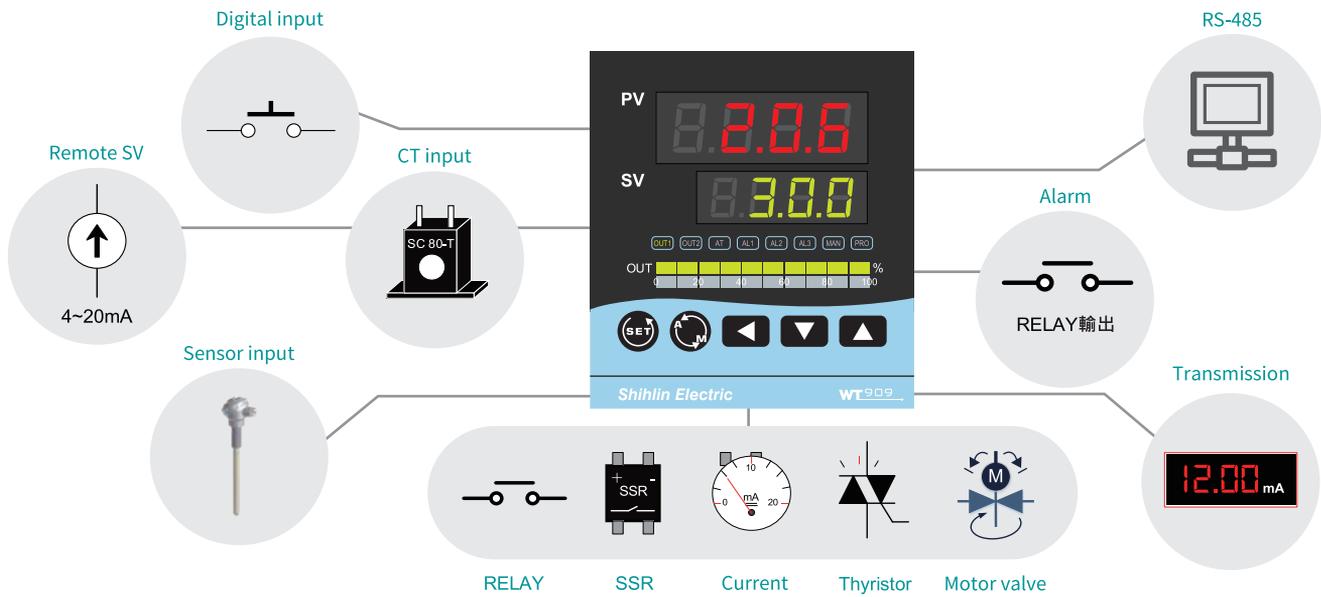

### Bar-Graph

The output percentage is directly displayed on the panel with a bar-graph indicator 10 LED's corresponding to every 10% differential in output (0~100%) (except WT404).

## Features

### Various I/O Types

### Excellent Control Performance

### Powerful Program Control

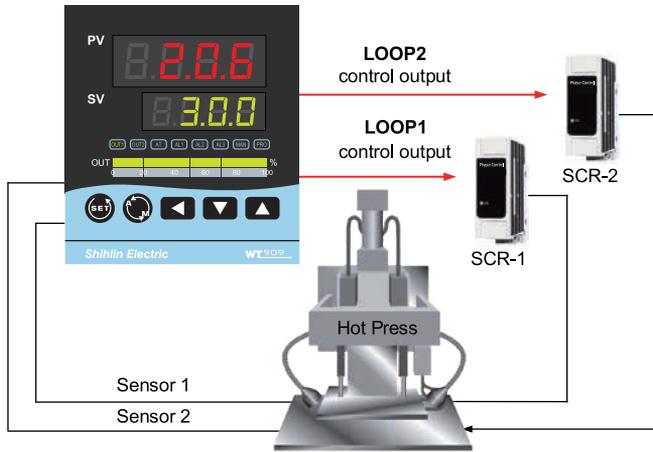

Provides 15 patterns of 10 segments of program control, each segment can be arbitrarily set to ramp, soak, step or cool down temperature, the user can be arbitrary according to the demand, the maximum can support to 150 segments program control.

# Features

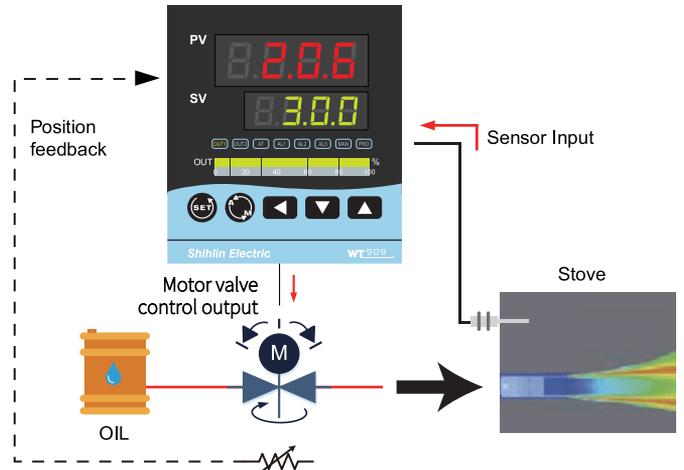

## Double Loop Control

Double Loop design, accept two sensor inputs at the same time, independently control two systems, effectively reduce system costs.

## Motor Valve Control

Can use position feedback control of valve opening input or servo control without valve opening input.

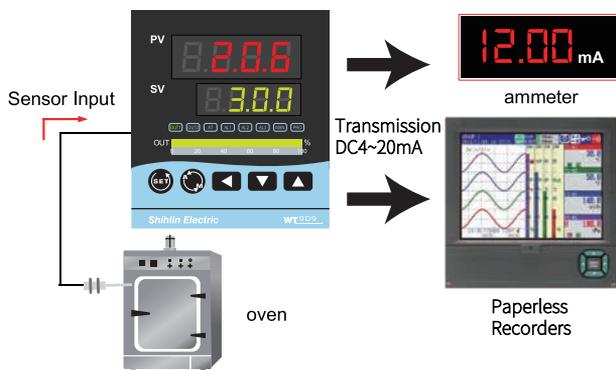

## Transmission

Transfer parameter digital values as analog signals to external devices.

signals : 0~20mA , 4~20mA , 0~5V , 1~5V , 0~10V ...

parameters : SV1, PV1, MV1...

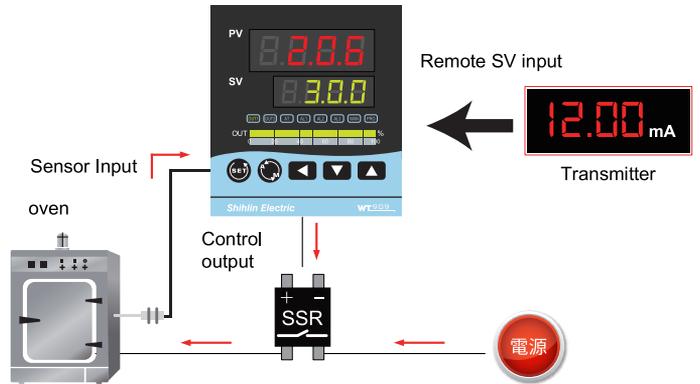

## Remote SV

SV value is controlled by an analog signal from an external device.

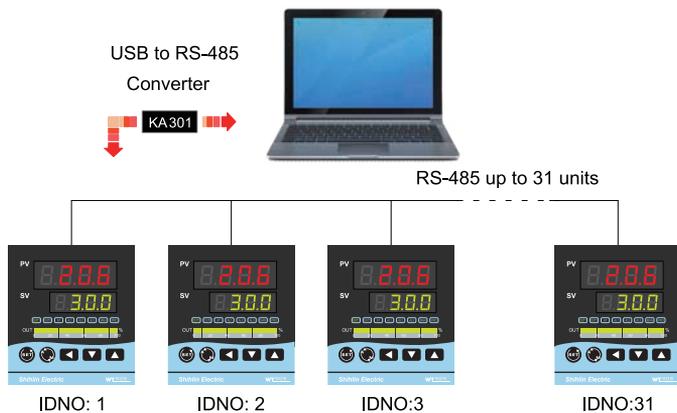

signals : 0~20mA , 4~20mA , 0~5V , 1~5V , 0~10V ...

parameters : SV

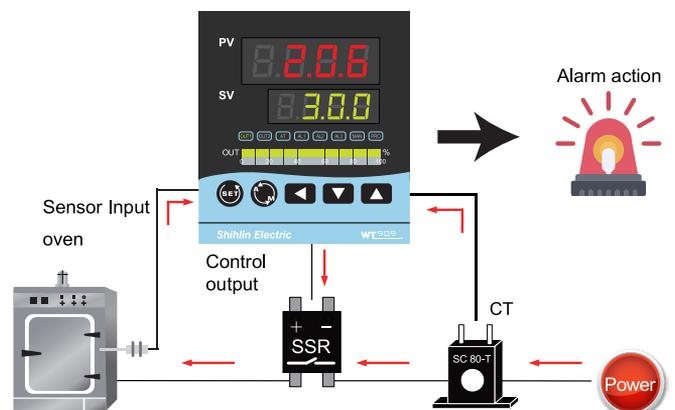

## Communication

Compatible with Modbus RTU communication protocol to quickly establish links with HMI, PLC or SCADA software.

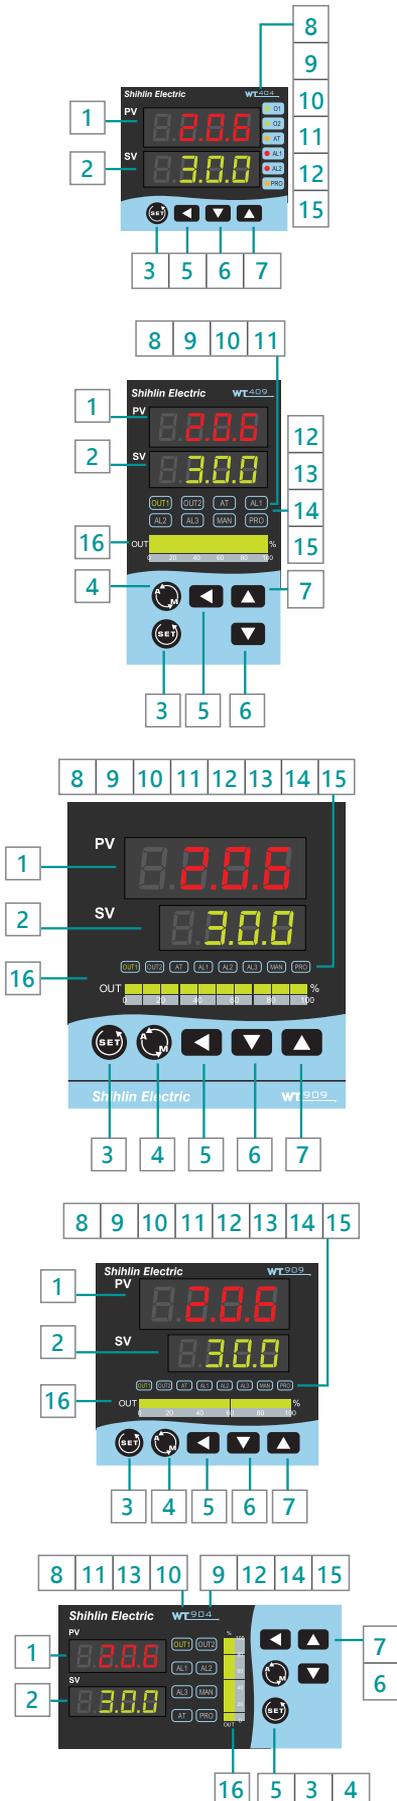

## Heater Break Alarm(HBA)

With a CT (current transformer) to monitor the heater current in real time, when the current value is abnormally reduced an alarm signal can be output to notify the user.
