SL3	021	1Ø 220V				
	043	3Ø 440V				

Product Feature

Save space, easier installation

Mini design, the size is smaller than all previous models. Choose between din rail installation and screw installation, save installation space effectively.

Intuitive Layout And Simple Operation

Power input on top and motor output at bottom, reduce the chance of wrong wiring. Built-in keypad with VR knob, easy to adjust frequency.

Dual Communication Interface

With two types of RS485 interface, users can easily control multiple units through communication.

Supports exterior keypad: DU06, DU08S, PU301, PU302
*Note:RS485 and keypad will not work simultaneously.

More than enough overload protection

Over current protection level (OC) 260%; Over current limit level (LT) 220%, provides stronger driving ability and longer lifetime.

Environmental Resistance Improve

Optimized air channel

Reduce the dust that goes inside, increase the lifetime of SL3 inverter.

Added structure to improve air channel.

Improved isolation design

Add isolation (thermal conductive) silicon film in Frame A to increase creepage distance.

Lower motor noise

Low noise carrier frequency control(Soft-PWM) can turn motor's metallic noise into a more pleasing buzz. SL3 is embedded with improved algorithm to further lower motor noise.

Noise comparison (db)

Compared with previous products, the noise is substantially lower at low speed.

Lower false alarm chance

With better current stall prevention function, the current can be regulated much faster which lowers the chance of triggering alarm.

Other specialized feature

- Built-in Modbus communication, Baud rate up to 38400bps.
- Built-in PID controller for constant pressure and constant temperature applications.
- Alarm record: 12 sets of records with 2 detailed record, check the operating status with full detail.
- Regeneration avoid function: monitor DC bus voltage in real-time and suppress DC bus voltage when it increase abnormally, prevents over voltage alarm.
- Automatic carrier frequency adjustment, prevent IGBT overheat(NTC) alarm.
- Built-in RFI filter for all range, suppress electric interference effectively.
- Free communication software SL-INVConfigurator, for testing, monitoring, upload and save parameters and much more.

Product Features

Multi-Pump Control

- Multi-Pump Control (with EB308R), with multiple relays to support pump control. Controlling maximum of 7 pumps at the same time for 1 inverter.

PC Communication Software

- This provides remote control of multiple inverters for parameters setup, copy and monitoring.

1. Isolated Air Channel

- Ventilation (air flow path) is isolated from the surface of thermal dissipation units and electrical parts. Dust will not be able to infiltrate the interior of the inverter through the fans.

Note: Even though the cooling duct is complete isolated, but if the inverter is installed at the environment where lots of dust or oil gas with out protection, the dust will still pass into inverter.

2. Enhanced PCB Coating

- Protect drive and ensure its operation safety and stability.
- Compliance with international standards IEC 60721-3-3 class 3C2.

Moisture proof

Corrosion proof

Dust proof

3. Terminal Block for Quick Wiring

Product Features

Temporary Compensation at Low Voltage

- When temporary shut-down occurs, output frequency will be controlled to maintain DC bus voltage of the inverter to decelerate the motor.
- When power resumes, inverter will control the motor to accelerate to its previous speed.
- Applicable for machines that are not able to commence free-run while decelerating.

Magnetic Flux Brake

- When the motor is stopping, the magnetic flux will be transmitted to the motor coil to shorten deceleration time without relying on regenerative resistance.

Regeneration Avoidance Functions

- By adjusting output frequency and voltage, DC bus voltage can be kept at a specified value and prevent overvoltage.

Low-noise Carrier Wave Control (Soft-PWM)

- Motor noise is controlled so that the metallic sound is transformed into a more pleasing buzz.
- Low noise operations to reduce the interference exerted upon external radio frequencies.
