

Compact

 SL3-021-0.4K ~ 2.2K
 SL3-043-0.4K ~ 2.2K

Thank you for choosing Shihlin inverters SL3 series.

These instructions will explain the use and precautions of the product. Please read the instructions carefully before installation and use the inverter correctly and safely.

1) Safety Instructions

Safety Instructions	
✓	Please contact the professionals to install, operate, maintain and inspect the product
✓	The safety level could be classified as "Warning" and "Caution".
⚠	Warning: the incorrect operation may cause hazardous situation, and accordingly lead to death or serious injury.
⚠	Caution: the incorrect operation may cause hazardous situation, and accordingly lead to general or minor injury or damage of the object.

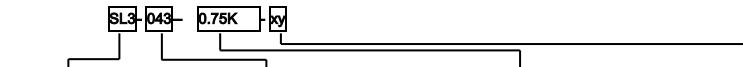

⚠ Warning

- The front cover plate and the wiring board should not be opened when the inverter is powered on. In addition, the inverter should not be operated when the front cover plate and the wiring board are demounted. Otherwise, the electric shock may be caused due to contacting with the high-voltage terminal and the charging part.
- If the wiring needs to be changed or inspection is required, the power supply of the inverter should be turned off first. There is still high voltage inside the inverter before the LED display of the inverter is turned off. Therefore, please don't touch the internal circuit and parts.
- The inverter must be earthed correctly.
- Please don't operate with the wet hand, don't touch the heat sink, and don't plug and unplug the cable; or electric shock may be caused.
- Do not replace the cooling fan when the inverter is powered on, otherwise the risk may occur. It is dangerous to replace the cooling fan when the inverter is powered on.

⚠ Caution

- Voltage applied to each terminal must be the one specified in the user manual; otherwise, failure or damage may be caused.
- Do not operate a voltage-resistant test for the parts inside the inverter because semiconductors in inverter may be easily damaged due to high-voltage breakdown.
- Do not touch the inverter because the temperature of the inverter is very high when it is powered on or right after disconnecting the power supply, only built-in keypad is touchable, otherwise, scalds may occur.
- Failure or damage may be caused due to wrong wiring.
- Do not reverse the polarities (+, -) by mistake, otherwise failure or damage may be caused.
- Please install the inverter on nonflammable walls without holes (to avoid contacting with the cooling fin of the inverter from the back). If the inverter is installed on or close to flammable objects it may cause a fire.
- Please disconnect the inverter from power supply in case of failure. Overload current passes through the inverter continuously may cause a fire.

2) Product Model

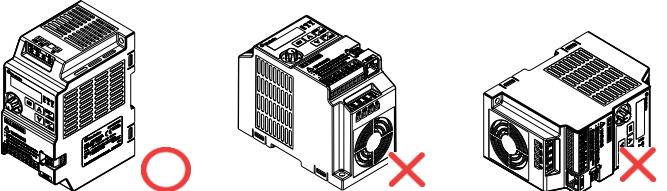

Series category	Voltage level	Capacity	Others
SL3 series	-043 : three phase 440V -021 : single phase 220V	0.75kW	None : General model -xy : Customize or specialize or region difference

3) Installation Environment

Ambient temperature	-10 ~ +40°C (non-freezing)
Ambient humidity	Below 90%Rh (non-condensing).
Storage temperature	-20 ~ +65°C.
Surrounding environment	Indoor, no corrosive gas, no flammable gas, no flammable powder.
Altitude	Altitude below 2000 meters, when altitude is above 1,000 m, derate the rated current 2% per 100 m
Vibration	Below 5.9m/s² (0.6G).
Grade of protection	IP20
The degree of pollution	2

4) Installation and Wiring

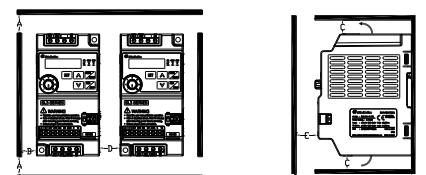

► Please install the inverter vertically in order not to reduce the heat dissipation effect:

(a) Vertical arrangement (b) Horizontal arrangement (c) Level arrangement

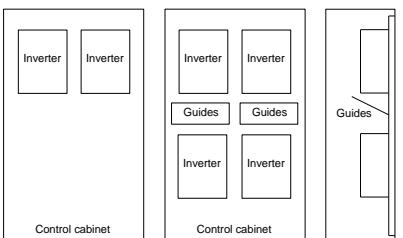

► Please follow the installation restrictions shown below to ensure enough ventilation space for inverter cooling and wiring space:

- Single or side by side installation :

size	Frame A	Frame B
A	50	50
B	50	50
C	100	100
D	50	50
E	50	50
F	ventilation direction	

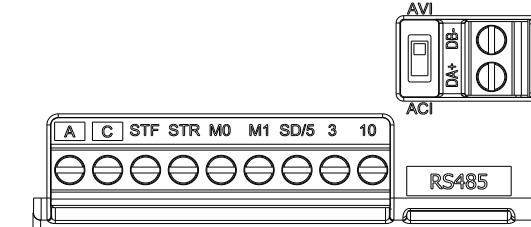

• Arrangement of multiple inverters :

Note1: When it is inevitable to arrange inverters vertically to minimize space , install guides since heat from the bottom inverters can increase the temperature on the top inverters, causing inverter failures

7) Control Terminal

► Arrangement of control terminal

► Control terminal description

Terminal type	Terminal name	Function instructions	Terminal specifications
Switch signal input	STF	These four terminals are multifunction digital input	Input impedance: 2.4 kΩ Action current: 3mA(when 24VDC) Maximum frequency: 1kHz
	STR		
	M0		
	M1		
Analog signal input	10	+10.5±0.5V	Maximum current:10mA
	3	0~10V/4~20mA	Input impedance:10kΩ 0~10V or 235Ω 4~20mA
Relay output	A	Multi-function relay output terminals. A-C is normally open contact, C is common terminal.	Maximum voltage:30VDC or 250VAC
	C		Maximum current: Resistor load 5A NO Inductance load 2A NO($\cos\phi=0.4$)
Communication terminal	RJ45	RS-485, optical coupling isolation	Bit rate: up to 38400bps
	DA+	RJ45 and "DA+/DB-" can't work at the same time	Distance: up to 500m
	DB-		
Common terminal	SD/5	Common terminal for terminal STF、STR、M0、M1、3	---

Note1 : When connecting control terminal to external devices, please pay attention to the voltage and current specifications of terminals to avoid damaging the inverter.

Note2 : The function of the control terminal is decided by inverter parameters, please refer to Instruction Manual for setting.

Note3 : Please pay attention to polarity when connect to external power and devices.

► Wiring method

• Wire connection

For the control circuit wiring, strip off the sheath of a cable, and use it with a blade terminal. For a single wire, strip off the sheath of the wire and apply directly.
Insert the blade terminal or the single wire into a socket of the terminal.
(1) Strip off the sheath for the below length. If the length of the sheath peeled is too long, a short circuit may occur with neighboring wires. If the length is too short, wires might come off.
Wire the stripped cable after twisting it to prevent it from becoming loose. In addition, do not solder it.

(2) Crimp the blade terminal.

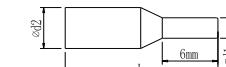

Insert wires to a blade terminal, and check that the wires come out for about 0 to 0.5 mm from a sleeve.

Check the condition of the blade terminal after crimping. Do not use a blade terminal of which the crimping is inappropriate, or the face is damaged.

• Please do use blade terminals with insulation sleeve. Blade terminals commercially available:

Cable gauge (mm²)	Blade terminals model	L (mm)	d1 (mm)	d2 (mm)	Manufacturer	Tool type
0.3	AI 0.25-6 WH	10.5	0.8	2	Phoenix Contact Co., Ltd.	CRIMPFOX 6
0.5		12	1.1	2.5		
0.75		12	1.3	2.8		
0.75(for two wires)		12	1.3	2.8		

Note1: Please use a small flathead screw driver (tip thickness: 0.6mm, width:3.0mm). If a flathead screwdriver with a narrow tip is used, terminal block maybe damaged.

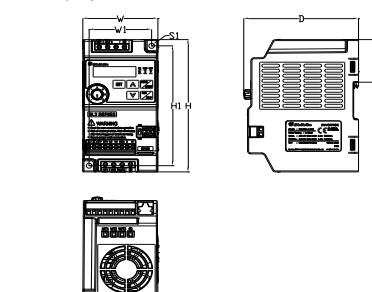

Note2: Tightening torque is 2.12~3.18kgf.cm, too large tightening torque can cause crew slippage, too little tightening torque can cause a short circuit or malfunction.

► Wiring Precautions

- After wiring, wire offcuts must not be left in the inverter.
Wire offcuts can cause an alarm, failure or malfunction. Always keep the inverter clean. When drilling mounting holes in an enclosure etc., please make sure no metal scraps enter the inverter.
- To prevent a malfunction due to noise, keep the signal cables 10 cm (3.94 inches) or more away from the power cables, and keep it away from the input/output side.
- Set the voltage/current input switch correctly. Incorrect setting may cause a fault, failure or malfunction.

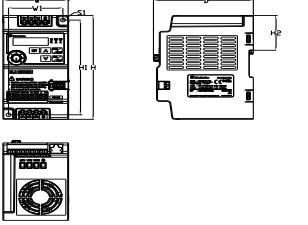

8) Appearance and Dimensions

► Frame A

Model	W	W1	H	H1	H2	D	S1
SL3-021-0.4K	68	56	132	120	42.5	104	5 (tighten torque 20~25kgf.cm)
SL3-021-0.75K							
SL3-021-1.5K							

► Frame B

Model	W	W1	H	H1	H2	D	S1
SL3-021-2.2K	72	59.5	142	129.5	42.5	110	5 (tighten torque 20~25kgf.cm)
SL3-043-0.4K							
SL3-043-0.75K							
SL3-043-1.5K							
SL3-043-2.2K							

9) Optional Equipment

Category	Name	Description	Order code
Keypad	DU06	LED display	SNKDU06
	DU08S	LED display	SNKDU08S
	DU10	LED display	SNKDU10
	PU301	LED display	SNKPU301
	PU302	LED display	SNKPU302

10) Parameter group

► System Parameter Group 00

Group	No.	Name	Setting Range	Default	User Setting
00-00	P.90	Inverter model	Read only	---	
00-01	P.188	Firmware version	Read only	---	
00-02	P.996 ~ P.999	Parameter restoration	0: Off 1: Clear alarm history (P.996=1) 2: Reset inverter (P.997=1) 3: Restore all parameters to default (P.998=1) 4: Restore some parameters to default 1 (P.999=1) 5: Restore some parameters to default 2 (P.999=2) 6: Restore some parameters to default 3 (P.999=3)	0	
			0: Parameters can be written only when the motor stops. 1: Parameters cannot be written.		
			2: Parameters can also be written when the motor is running. 3: Parameters cannot be read when in password protection.		
00-04	P.294	Password parameter	0-65535	0	
00-05	P.295	Password setup	2-65535	0	
00-06	P.110	Built-in keypad monitor selection	0: When inverter starts, built-in keypad enters monitor mode automatically, screen displays output frequency (with slip compensation). 1: When inverter starts, built-in keypad displays target frequency. 2: When inverter starts, built-in keypad enters monitor mode automatically, screen displays steady state output frequency. 3: When inverter starts, built-in keypad enters monitor mode automatically, screen displays current pressure and feedback pressure of the constant pressure system in percentage. 4: When inverter starts, built-in keypad doesn't enter monitor mode but enter the previous mode before power off. 5: When inverter starts, built-in keypad enters monitor mode automatically, screen displays current pressure and feedback pressure of the constant pressure system.	2	
00-07	P.161	Multi-function display	0: Output AC voltage (V) 1: DC bus voltage, (V) 2: Inverter temperature rising accumulation rate (%) 3: Target pressure of the constant pressure system (%) 4: Feedback pressure of the constant pressure system (%) 5: Running frequency (Hz) 6: Electronic thermal accumulation rate (%) 7: Reserved 8: Signal value (mA) of 3-5 input terminals (mA/V). 9: Output power (kW). 10: Reserved 11: Forward/reverse rotation signal. 1: forward rotation 2: reverse rotation 0: stop. 12: NTC temperature (°C)	0	

Group	No.	Name	Setting Range	Default	User Setting
00-07	P.161	Multi-function display	13 : Motor electronic thermal accumulation rate (%) 14~18 : Reserved 19: Digital terminal input state 20: Digital terminal output state 21: Actual working carrier frequency	0	
			0 : Display output frequency(not mechanical speed) 0.1~5000.0 1~50000		
			X0: Speed display unit is 1 X1: Speed display unit is 0.1		
			XXX0: Use up down button on built-in or external keypad to set frequency XXX1: Use keypad knob on external keypad to set frequency XXX2: Use keypad knob on built-in keypad to set frequency XDX0: Frequency set by the up down button on built-in keypad will be automatically stored within 30s X1XX: Frequency set by the up down button on built-in keypad will be automatically stored within 10s X2XX: Frequency set by the up down button on built-in keypad will not be automatically stored 0XXX: Set frequency will work immediately when use up down button on built-in keypad 1XXX: Set frequency will work after pressing SET when use up down button on built-in keypad		
			1~15kHz		
00-10	P.59	Keypad frequency setting selection	0: Off 1: When 00-11(P.72)<5,Soft-PWM is on(only apply to V/F control) 2 : When 00-11(P.72) > 9, if the IGBT temperature is high, carrier frequency will decrease automatically, when temperature go back to normal, carrier frequency go back to 00-11(P.72) value	0	
			0: Idling brake 1: DC brake		
			0: Press STOP button and inverter stop running in PU and H2 mode 1: Press STOP button and inverter stop running in all mode.		
00-16	P.79	Operation mode selection	0: Forward/reverse rotation are both permitted. 1: Prevent reverse rotation (Giving reverse signal decelerates and stops the motor). 2: Prevent forward rotation (Giving forward signal decelerates and stops the motor). 0: "PU mode", "external mode" and "Jog mode" are interchangeable. 1: "PU mode" and "JOG mode" are interchangeable. 2: "External mode" only 3: "Communication mode" only 4: "Combined mode 1" 5: "Combined mode 2" 6: "Combined mode 3" 7: "Combined mode 4" 8: "Combined mode 5"	0	
			0: Frequency set by built-in keypad 1: Frequency set by RS485 communication 2: Frequency set by analog input		
			0: In communication mode, run signal and frequency is given by communication. 1: In communication mode, run signal and frequency is given by external signal.		
			0: Induction motor V/F control 1: Reserved 2: Reserved		
			0: Frequency related parameter default value is 60Hz. 1: Frequency related parameter default value is 50Hz.		
00-21	P.300	Motor control mode selection	0: Parameter is displayed in "group mode" 1: Parameter is displayed in "P parameter mode"	0	
			0: Proportional linkage gain

PID Parameter Group 08

Group	No.	Name	Setting Range	Default	User Setting
08-00	P.170	PID function selection	0: Off 2: Parameter 08-03(P.225) as target value, terminal 3-5 current/voltage input as feedback source	0	
			0: Negative feedback control. 1: Positive feedback control.		
08-01	P.171	PID feedback control method	0~100	0	
			0~100.0s		
08-04	P.172	PID proportional gain	0~1000ms	20	
08-05	P.173	Integral time	0~1000.0s	1.0s	
08-06	P.174	Differential time	0~1000.0s	0ms	
08-07	P.175	Abnormal deviation	0~200.0%	0.0%	
08-08	P.176	Abnormal duration time	0~600.0s	30.0s	
08-09	P.177	Abnormal processing mode	0: Stop freely 1: Slow down to stop 2: Alarm and continue operation	0	
			0~100.0%		
08-10	P.178	Sleep detection deviation	0~255.0s	1.0s	
08-11	P.179	Sleep detection duration time	0~120.00Hz	90.0%	
08-12	P.180	Wake-up level	0~120.00Hz	40.00Hz	
08-13	P.181	Stop level	50Hz system:0~120.00Hz 60Hz system:0~120.00Hz	50.00Hz 60.00Hz	
08-14	P.182	Upper integral limit	0~10.00Hz	0.50Hz	
08-15	P.183	Deceleration step length when stable	0~10.00Hz	0.50Hz	
08-18	P.223	Analog feedback signal bias	0~100.0%	0.0%	
08-19	P.224	Analog feedback signal gain	0~100.0%	100.0%	
08-43	P.251	PID pressure unit (Bar) setting	1.0~100.0	100.0	
08-45	P.253	Analog signal feedback loss detection time	0~600.0	0.0	
08-46	P.254	Analog signal feedback loss action selection	0: Alarm AErr and inverter stop freely 1: Slow down to stop then alarm AErr 2: Alarm AErr and continue operation	0	
			0~100.0%		

Application Parameter Group 10

Group	No.	Name	Setting Range	Default	User Setting
10-00	P.10	DC brake operating frequency	0~120.00Hz	3.00Hz	
10-01	P.11	DC brake operating time	0~60.0s	0.5s	
10-02	P.12	DC brake operating voltage	0~30.0%	4.0%	
10-03	P.151	Zero-speed control function selection	0: Off. 1: DC voltage braking	0	
10-04	P.152	Voltage at zero-speed control	0~30.0%	5.0%	
10-05	P.242	DC brake before inverter start	0: Off. 1: Before starting operate DC brake first.	0	
10-06	P.243	DC brake time before inverter start	0~60.0s	0.5s	
10-07	P.244	DC brake voltage before inverter start	0~30.0%	4.0%	
10-08	P.150	Restart mode selection	X0 : No frequency search. X1 : Reserved. X2 : Decrease voltage mode 0X : Power on once. 1X : Start each time. 2X : Only instantaneous stop and restart	0	
10-09	P.57	Restart idling time	0~30.0s	99999	
10-10	P.58	Restart rising time	0~60.0s	10.0s	
10-11	P.61	Remote control function	0: Off. X1 : Remote control function, frequency save in memory X2 : Remote control function, frequency won't save X3 : Remote control function, frequency won't save, clear frequency setting every time STF/STR "turn off". X4: Remote control function, frequency save in memory every 5s 1X: Frequency command range 01-01(P.2)~01-00(P.1), frequency command value from RH/RM setting	0	
10-12	P.65	Auto reset function	0: Off. 1: When over-voltage, inverter will reset. 2: When over-current, inverter will reset. 3: When either over-voltage or over-current, inverter will reset. 4: When any alarm occurs, inverter will reset.	0	
10-13	P.67	Auto reset times	1~10: If the alarm exceeds 10-13(P.67) times, inverter will not reset.	0	
10-14	P.68	Auto reset waiting time	0~360.0s	6.0s	
10-15	P.69	Auto reset times count	Read only	0	
10-16	P.119	Forward and reverse rotation dead time	0~3000.0s	0.0s	
10-17	P.159	Energy-saving control function	0: Off. 1: Energy-saving mode.	0	
10-18	P.229	Dwell function selection	0: Off. 1: Backlash compensation function. 2: Acceleration and deceleration interrupt waiting function.	0	
10-19	P.230	Dwell frequency at acceleration	0~599.00Hz	1.00Hz	
10-20	P.231	Dwell time at acceleration	0~360.0s	0.5s	
10-21	P.232	Dwell frequency at deceleration	0~599.00Hz	1.00Hz	
10-22	P.233	Dwell time at deceleration	0~360.0s	0.5s	
10-23	P.234	Triangular wave function selection	0: Off. 1: If terminal function TRI is triggered, triangular wave function will on. 2: Triangular wave function is on at all time.	0	
10-24	P.235	Maximum amplitude	0~25.0%	10.0%	
10-25	P.236	Amplitude compensation at deceleration	0~50.0%	10.0%	
10-26	P.237	Amplitude compensation at acceleration	0~50.0%	10.0%	
10-27	P.238	Amplitude acceleration time	0~360.00s/0~3600.0s	10.00s	
10-28	P.239	Amplitude deceleration time	0~360.00s/0~3600.0s	10.00s	
10-46	P.268	Voltage stall level	220V : 155~400V 440V : 310~800V	380V	

Group	No.	Name	Setting Range	Default	User Setting
10-55	P.226	Reciprocating machine function selection	0 : Off. 1 : Turn on reciprocating machine function	0	
10-56	P.227	Reciprocating forward limit time	0~3600.0s	0.0s	
10-57	P.228	Reciprocating reverse limit time	0~3600.0s	0.0s	

Special Adjustment Parameter Group 13

Group	No.	Name	Setting Range	Default	User Setting
13-00	P.89	Slip compensation coefficient	0~10	0	
13-01	P.246	Modulation coefficient	0.00 ~ 1.20	0.50	
13-03	P.286	High frequency vibration suppression factor	0~15	0	
13-04	P.283	Current detect method	0~2	2
