

Case name	Shihlin SA3 on material winding machine				
Department	FA engineering group	date	2016.04.25	page	3
Product	Shihlin SA3 series				

1. Requirements

This case is a paper winding machine. It uses a tension feedback sensor to feedback -10~10V voltage for torque control, 0~10V for speed control. There is a motor on each side, when one motor has insufficient torque, the other motor reacts to compensate, so that stable tension control can be achieved.
